The Dos and Don'ts of Colorectal Cancer Screening

Do's	Don'ts
<ul style="list-style-type: none"> ✓ Do make a recommendation! Be clear that screening is important. Ask patients about their needs and preferences. The best test is the one that gets done. ✓ Do use the American Cancer Society and/or the USPSTF recommendations for colorectal cancer screening in average-risk adults, starting at age 50.* ✓ Do assess your patient's family history, medical history, and age. ✓ Do be persistent with reminders. ✓ Do develop standard office operating procedures and policies for colorectal cancer screening, including the use of EHR prompts and patient navigation. 	<ul style="list-style-type: none"> ✗ Do not use digital rectal exams (DREs) for colorectal cancer screening. In 1 large study, DREs missed 19 of 21 cancers. ✗ Do not repeat a positive stool test. Always refer the patient for a colonoscopy. ✗ Do not use stool tests on those with a higher risk. A colonoscopy must be performed. ✗ Do not forget to use non-clinical staff to help make sure screening gets done. They can hand out educational materials and schedule follow-up appointments. ✗ Do not forget to coordinate care across the continuum.

* If a patient at any age is symptomatic, please evaluate and refer them as needed for a colonoscopy.
